### 1 [Specification, validation, and synthesis of email agent controllers: A case study in function rich reactive system design](#)

Robert J. Hall

August 2000 **Proceedings of the third workshop on Formal methods in software practice**

Full text available: pdf(527.90 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

With a few exceptions, previous formal methods for reactive system design have focused on finite state machines represented in terms of boolean states and boolean next-state functions. By contrast, in many reactive system domains requirements engineers and developers think in terms of complex data types and expressive next-state functions. Formal methods for reactive system design must be extended to meet their needs as well. I term a reactive system function rich if expr ...

### 2 [How to avoid unwanted email](#)

Robert J. Hall

March 1998 **Communications of the ACM**, Volume 41 Issue 3

Full text available: pdf(294.69 KB)

Additional Information: [full citation](#), [references](#), [citations](#), [index terms](#)

### 3 [Enabling power management for network-attached computers](#)

Kenneth J. Christensen, Franklin 'Bo' Gullledge

March 1998 **International Journal of Network Management**, Volume 8 Issue 2

Full text available: pdf(134.70 KB)

Additional Information: [full citation](#), [abstract](#), [references](#), [index terms](#)

Power management is an emerging area of interest for network management. This article reviews current developments and describes methods for enabling power management in network-attached computers. © 1998 John Wiley & Sons, Ltd.
